Foreword

Surgical Technology International, Volume 38           May, 2021

Seigo Kitano, MD, PhD
President, Oita University
President, the Asian-Pacific Society for Digestive Endoscopy
Honorary President, the Japan Society for Endoscopic Surgery

We have just opened the door to the era of disruptive innovation which influences interventional technology in surgery as of 20 years since the beginning of the new millennium 2000. Artificial intelligence and internet of things will change a lot in the surgical technology and surgical society.

Surgical Technology International was first published in 1992 and played an important role in developing new ideas and technology until now. It is a great pleasure for me, as an author in two previous publications, to contribute to make this book popular among surgeons with creative minds. This volume 38th edition contains variety of topics which give us implementations and suggestions for surgeons to carry on the daily practice and provides the most attractive tools for future surgery.
